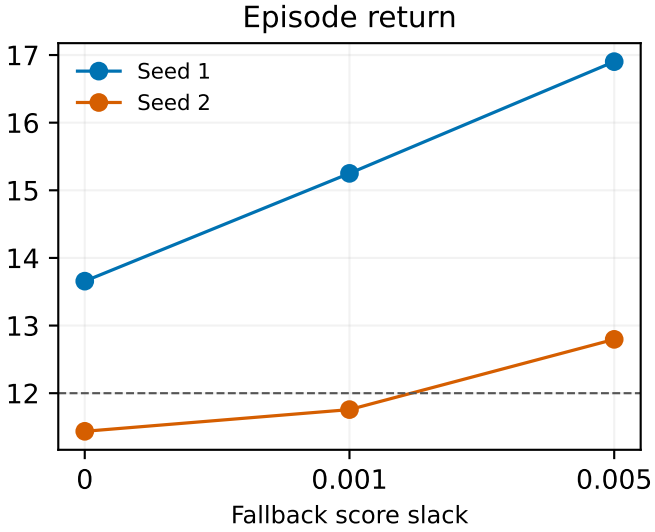
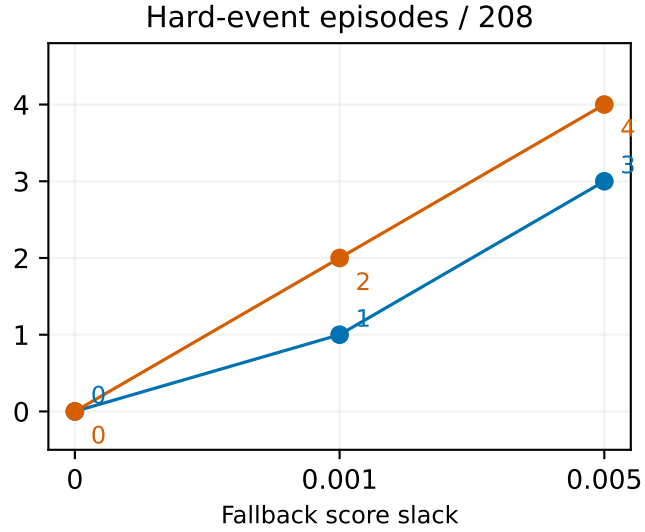
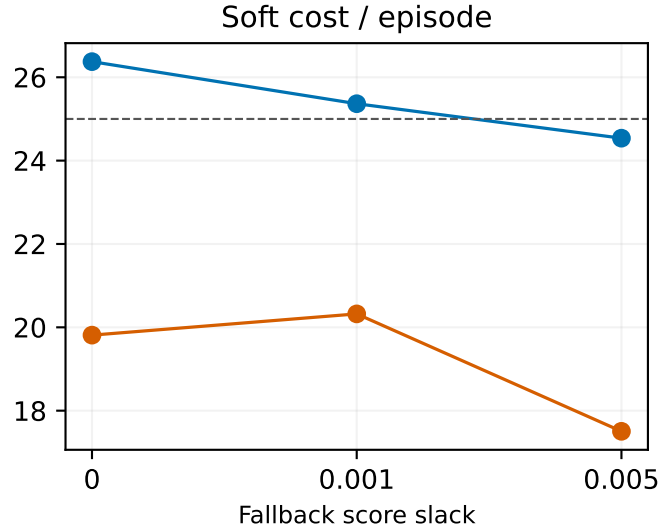
CG2 fallback screen: reward improves, hard violations increase

1,248 completed episodes; 2 fixed policies x 3 slacks x 208 matched screening resets







Promotion requires BOTH policies: return >=12, soft mean <=25, and no extra hard events vs slack 0.
Neither nonzero slack passes. Nearly every candidate set fails the hard-score threshold.
Exploratory, reused reset blocks. Zero observed events is not zero risk; score slack is not a risk bound.
