

Penalty view

Costs enter the objective

Fixed penalty

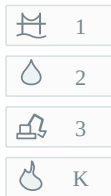

Fixed prices can leave budget leakage.

(schematic)

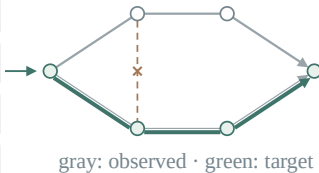

SafeOT

One flow, all budgets

Soft costs

Entropic projection

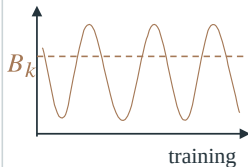

× hard constraints remove edges

Safety prices before violations

Constraint view

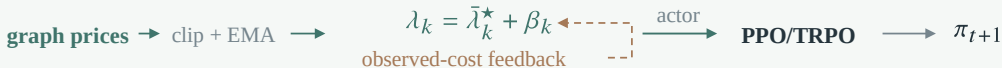

Budgets bound costs

Lagrangian feedback

Observed-cost feedback can lag and oscillate.

(schematic)

One price rule

Fixed penalty

$c = 0$, β_k fixed

exact settings

Lagrangian

$c = 0$, β_k adaptive

SafeOT

finite ε

LP

$\varepsilon \rightarrow 0$

conditional limits

Active-set

$\varepsilon \rightarrow \infty$, saturated clip
